Accessing CCS Medical Therapy Unit (CCS MTU): A Pathway for Health Professionals
(Numbers refer to the explanatory boxes at sides and at the bottom of the page)

Child with an abnormal neurological examination or with delays in motor skills

1. Are delays in domains other than motor skills?
   - YES OR NO

2. Refer to early intervention or special education
   - Refer: > Early intervention for children less than 3 years (see Algorithm)
     > Special education for children older than 3 years (see Algorithm)

3. Does the child meet eligibility by CCS definition of CP? (No fiscal criteria)
   - YES
   - NO

4. Refer to CCS MTU
   - Other eligibility criteria:
     - Neuromuscular disease (e.g., Duchenne Muscular Dystrophy)
     - Musculoskeletal injury (e.g., brachial plexus injury)
     - Deformity
     - Injury or deformity is more than single orthopedic condition (e.g., club foot)

5. Does the child have other eligibility criteria?
   - YES
   - NO

6. Neurological findings:
   - Symptoms in CCS definition of CP OR
   - 2 of the following:
     > Increased DTR
     > Abnormal posture
     > Asymmetry
     > Age 1-3 years old: hypotonicity AND exaggeration of primitive reflexes
     > Less than 1 year of age: hypotonicity OR exaggeration of primitive reflexes

- Refer to private therapy OR special education OR monitor.
